How the Shooting Brake came by its name.

It was a hunting vehicle that gave it its name. We have English noblemen's passion for hunting to thank for the fact that the CLS Shooting Brake was named after it.

Brake was the name once used in England to describe carriages which reined in untamed horses' urge to move. Because the combinations could be easily damaged in the process, versatile coaches were used – they also served to transport a hunting party, along with all the necessary equipment. Such a vehicle, used when going shooting, was known as a shooting brake. In the 1960s motorised shooting brakes came into fashion, above all in Great Britain. These were cultivated sports cars which afforded their owners the space they required for their sophisticated hobbies – as well as the luxury to which they were accustomed.

With the CLS Shooting Brake Mercedes-Benz is adding a new chapter to the story of this exclusive type of vehicle. And it goes without saying that it is a welcome sight not just in the counties of England. Its hunting grounds also include the boulevards of metropolises all over the world. You don't herald in a new era with a fashion fad.

Those who orientate themselves by the norm will be overtaken by fashion. Those who orientate themselves by the status quo will not outdo it. Those who create a car without passion will not build one that clings to the road like the CLS Shooting Brake. Become a hunter yourself. With agile engines and 7G-TRONIC PLUS.

Hunts bends – not trends.

Does anyone need luxury? Does anyone need style? Does anyone need a refined taste which is reflected in fine trim? Does anyone need finely stitched double-lapped felling in exclusive materials? Yes, they do. After the first drive at the latest.

Adds a new term to the design idiom.

How do you describe something new? How do you put an unseen form into words? How do you christen a racy sports car with a generous amount of space? What do you call a car that has no peer? Allow us to introduce: the CLS Shooting Brake.

Racing line meets performance curve.

You are one step ahead. You rise earlier. You throw out ideas and develop new ones. You celebrate successes, but do not rest on them. Why should you? In order to relax you simply climb into the CLS Shooting Brake.

IT STOL

-

The second s

9.14

Pioneers need horses.

It takes courage to swim against the tide. It takes courage to stray off the beaten track. And a huge amount of enthusiasm to be the first to do something new. Properties that the CLS 63 AMG Shooting Brake boasts. And that it is only too happy to pass on to you in the form of supreme driving dynamics. \rightarrow Page 66–73

Everyone needs a special place. Artists paint in their workshops, star tenors sing in opera houses, motorsport enthusiasts go on pilgrimages to the race track. Should your luggage not have a special place too? The optional designo wood floor in open-pore American cherry with black inlay work.

State of the owner where

The future is red, green and blue.

The face of a car, its front section, conveys an impression of its character, its temperament and its dynamic credentials: car headlamps communicate this information particularly effectively when their form resembles that of the human eye.

Until recently, however, the limitations of the technology available to the designers hindered their efforts to attain this ideal. But a technological revolution has changed all that: headlamps featuring LEDs (light-emitting diodes). Bright, fast-responding and able to be controlled individually, LEDs in the colours red, green and blue open up exciting, unrivalled design possibilities which promise forms which have even greater emotional appeal and dynamic potential.

It is not just the aesthetic dimension that is enhanced by the new lighting technology. Visibility for the driver is also improved. This is because the light produced by the LEDs has a colour temperature of 5500 Kelvin – the same as average daylight. And since the human eye has adapted itself to sunlight during the course of evolution, our eyes perceive LED light as particularly pleasant.

Sometimes, words are just not enough.

It's always difficult to control the emotions. Especially when looking at the CLS. A design object which has just one aim: to seduce you. Yet for all its expressive looks, there are just as many rational reasons for choosing the four-door coupé. After all, seduction begins in the mind.

Sensuality and sense have never been closer.

There's no shame in yielding to temptation as strong as the interior design of the CLS. The successful blend of high-quality wood, fine leather and a trim with an elegant silver-chrome surface appeals to all the senses and will satisfy even the most exacting of design and comfort requirements. In fact, not getting in would be unforgivable. \rightarrow Page 84–91

Looks that take your breath away. Technology that reduces your CO_2 emissions.

Looks that make your heart race. Safety systems that reassure you.

Beauty is not its only trump card. The CLS also features impressive qualities which only reveal themselves at second glance. In critical driving situations, its safety and assistance systems can make all the difference and enhance your safety considerably. It's reassuring to be able to trust the new love in your life straight away. \rightarrow Page 52–55

Unashamedly flirtatious.

Irresistible character: even when at a standstill, the CLS has the power to captivate you. The optionally available AMG Sports package further enhances the feeling of athleticism. And that which is visible is also palpable. So don't hold back. Because the CLS certainly doesn't. \rightarrow Page 82–83

Three magic words. Shortened to three letters.

CLS 356

A beautiful body becomes even more attractive when it's honed to perfection. But what's inside matters, too. And that's exactly how it is with the CLS 63 AMG. Settle back into its AMG sports seats upholstered in nappa leather and select your own set-up using the DRIVE UNIT. If only high-performance sport were always this easy and comfortable. \rightarrow Page 68–69

37

How to fall in love in seconds. The CLS 63 AMG unleashes your feelings. But it's not just the superb acceleration that transforms every trip into an emotionally charged experience. The athletic AMG design sets even the sportiest of hearts racing. \rightarrow Page 66–73

Quite possibly the world's fastest declaration of love.

Mercedes-Benz Intelligent Drive – a new era in mobility.

Our engineers focus on the future every day, the aim being to implement innovative technology. This aspiration has resulted in developments that have had a lasting impact on automotive engineering. In other words, we are working to make sure that a Mercedes-Benz will always be ahead of its time.

We have developed one groundbreaking solution after another to get closer to realising our vision of safe and accident-free driving. Innovative technologies such as the anticipatory occupant protection system PRE-SAFE® and DISTRONIC PLUS proximity control first made it onto the road in a Mercedes-Benz, setting new standards in vehicle safety. This is because it was the first time that active and passive systems had been combined – for even better protection and driving comfort. Mercedes-Benz Intelligent Drive takes things a stage further by intelligently combining the sensors from various safety and assistance systems. For us, it's a logical progression as the traffic situation has changed. There are more vehicles on the road, the driver's job is becoming more complex and the likelihood of distraction is increasing.

To give the driver even more assistance and deal with the specific situation effectively, we have revolutionised the car once more: a Mercedes-Benz is now able to "see" better in all dimensions. It has an even better view of the road and other road users, and it can react to what it sees. We have developed a stereo camera system that is capable of seeing in three dimensions. Together with further sensors, this produces a 360° all-round view – a precise image of the surroundings. If the driving assistance and safety systems detect danger, they can respond within a fraction of a second to provide the driver with the right support for the situation in hand: by braking in dangerous situations, for example, or by masking out the portion of the main beam affecting oncoming traffic.

Pioneer of innovation – Mercedes-Benz Intelligent Drive once again underlines our ambition to lead and points the way ahead to accident-free and autonomous driving. The following pages include further information about our safety and comfort systems. They are available as standard equipment or optional extras for the CLS-Class, depending on the model specification; further details can be found on pages 52–54, 57 and 60–61.

Services

Facts & colours

BlueEFFICIENCY – fast forward to tomorrow.

Mercedes-Benz brings the future of motoring to the road faster. With ever more efficient vehicles and a production process that wastes fewer and fewer resources. We call this all-encompassing approach BlueEFFICIENCY. By way of example, BlueTEC technology for the diesel engine reduces the nitrogen oxides in the exhaust gases by up to 90%, while the natural-gas drive NGT drastically reduces emissions and fuel costs. Our hybrid models, featuring an intelligent combination of internal combustion engine and electric drive, can reduce fuel consumption significantly. What's more, electromobility is also moving into the fast lane with the SLS AMG Coupé Electric Drive. Meanwhile, technical and aerodynamic enhancements right down to the last detail make the BlueEFFICIENCY Editions available in selected model series true champions of efficiency.

But every CLS-Class model already boasts a raft of BlueEFFICIENCY features – comprehensive vehicle optimisation measures that have been adapted specifically for this model series.

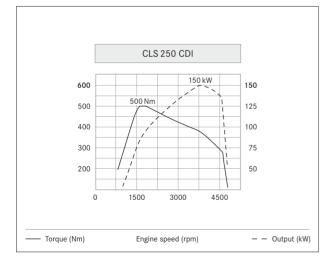

- 1 Ancillaries with energy-saving control (oil, water and fuel pumps, electromechanical steering).
- 2 Radiator shutter for CLS 250 CDI and CLS 350.
- 3 Alternator management with energy recuperation.
- 4 BlueDIRECT V6 and V8 engine generation with direct petrol injection, plus twin turbochargers for the CLS 500 and CLS 500 4MATIC.
- 5 Refrigerant compressor only activated when actually needed.
- 6 Optimised aerodynamics (exterior-mirror housings, front apron, rear apron, underbody).
- 7 ECO start/stop function (not for CLS 350 CDI Coupé and CLS 350 CDI 4MATIC Coupé).
- Optimisation of rolling resistance (depending on the wheel/tyre combination).
- 9 Optimised 7G-TRONIC PLUS automatic transmission.

Diesel engines.

Powerful and quiet with remarkably low fuel consumption and emissions: the CLS features the latest diesel technology from Mercedes-Benz.

4-cylinder in-line engine. The qualities of the 4-cylinder diesel powerplant are very much in tune with the times: it delivers an impressive maximum torque of 500 Nm. At the same time, the diesel engine is sparing on fuel, low on emissions, is quiet and – at 150 kW (204 hp) – particularly powerful for its displacement class. This is made possible through a package of cutting-edge technologies. The current generation of common-rail diesel technology impresses with its injection pressures of up to 2000 bar, optimised

combustion chambers and particularly fast and precise piezo injectors. High ignition pressure and two-stage charging are responsible for the availability of high torque across the engine speed range. Two Lanchester balancer shafts ensure the required smooth running. The ECO start/stop function stops the engine temporarily when the car comes to a halt, while optimised alternator management ensures consistent use of the engine's coasting phases as well as the braking process in order to recuperate kinetic energy. Meanwhile the radiator shutter reduces the aerodynamic drag when the engine requires only moderate cooling. But that is not all: this model also features integral measures such as tyres with reduced rolling resistance (depending on the wheel/tyre combination), intelligently controlled ancillaries and improved aerodynamics, all of which help to boost the car's efficiency sustainably.

The engine in the CLS 250 CDI combines pulling power with low fuel consumption and emissions.

The CLS 250 CDI achieves its peak torque of 500 Nm at between just 1600 and 1800 rpm.

V6 engine. The CLS 350 BlueTEC¹, CLS 350 BlueTEC 4MATIC¹, CLS 350 CDI and CLS 350 CDI 4MATIC also place the emphasis on efficiency. BlueTEC stands for measures which optimise the consumption, plus for the cleaning and aftertreatment of exhaust gases, making this compression-ignition engine one of the world's cleanest diesel drive systems. Amongst the features which have been developed for the V6 diesel engine is an intake and exhaust system with optimised inflow and outflow characteristics. The engine in the CLS 350 BlueTEC1 and CLS 350 BlueTEC 4MATIC1 develops an output of 185 kW (252 hp). The engine in the CLS 350 CDI and CLS 350 CDI 4MATIC has an output of 195 kW (265 hp) making it the most powerful diesel drive unit with common-rail technology available for the CLS. Furthermore, fast and precisely controlled piezo injectors, a high injection pressure of up to 1600 bar and an optimised turbocharger help to save fuel. With the engine developing an immense peak torque of 620 Nm at 1600-2400 rpm, the result is effortlessly superior pulling power in all driving situations.

The engine in the CLS 350 BlueTEC¹ with an output of 185 kW (252 hp).

1 Available for CLS Coupé only.

Petrol engines.

The BlueDIRECT petrol engines were developed with the aim of substantially reducing fuel consumption and emissions without compromising on dynamism and ride comfort. The result: advanced engine technology from Mercedes-Benz.

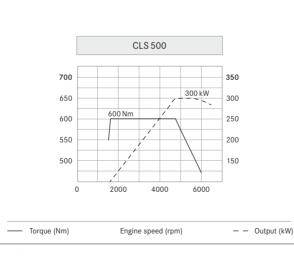

V6 engine. Humble fuel consumption and correspondingly low CO₂ emissions yet high dynamism – the CLS 350 is impressively efficient. These advantages are primarily down to the current-generation direct petrol injection from Mercedes-Benz, which operates using spray-guided combustion and high-pressure injection by means of piezo injectors. Maximum output is 225 kW (306 hp), while the peak torque of 370 Nm is available between 3500 and 5250 rpm. Further factors which help to reduce fuel consumption include the standard-fit ECO start/stop function, an efficient intake and exhaust system, controlled ancillaries, intelligent alternator management and consistently applied lightweight-design principles.

The engine of the CLS 350 model can deliver high-torque power in every driving situation.

V8 engine. Fitted in the CLS 500, the powerplant from the BlueDIRECT engine family impresses with a combined fuel-consumption figure of 9.0 litres per 100 kilometres (CLS Shooting Brake 9.3–9.2 litres per 100 kilometres). Lightweight design, downsizing to a displacement of 4.7 litres as well as direct petrol injection with extremely fast and precisely controlled piezo injectors contribute to this, as do the innovative BlueEFFICIENCY technologies. The ECO start/stop function can stop the engine temporarily when the car is at a standstill. At the same time, the CLS 500 and the CLS 500 4MATIC offer extremely impressive driving dynamics thanks to twin turbochargers and an intercooler. An output of 300 kW (408 hp) and a peak torque of 600 Nm, which is on tap from just 1600 rpm, mean effortlessly superior motoring in almost any situation. The V8 engine boasts impressive power delivery, even at low engine speeds, not to mention levels of quietness and refinement which are exceptional for an eight-cylinder unit. The turbochargers ensure that the engine provides high torque from low revs. This means that, to the driver, the

V8 biturbo engine feels as comfortable and superior as a V8 naturally aspirated engine with a much higher displacement. The flagship model in the CLS line-up is the CLS 63 AMG S-Model 4MATIC with a 5.5-litre V8 biturbo engine generating 430 kW (585 hp) and 800 Nm.

The CLS 500 delivers a peak torque of 600 Nm between 1600 and 4750 rpm.

The effortlessly superior V8 engine developing 300 kW (408 hp) is available for the CLS 500 and CLS 500 4MATIC models.

Safety

Comfort

Transmission.

Whether it be an economical or a sporty driving style – the 7G-TRONIC PLUS has been optimised in line with the model in which it is installed. Plus it is intuitive and ergonomic to use.

7G-TRONIC PLUS. The CLS is fitted as standard with the 7G-TRONIC PLUS 7-speed automatic transmission and the DIRECT SELECT lever on the steering column. Shift paddles on the steering wheel enable the driver to influence the gear changes. Seven forward gears allow optimum revs, thus reducing fuel consumption. In city traffic especially, the 7-speed automatic transmission brings about a further reduction in fuel consumption thanks to the ECO start/stop function (not for the CLS 350 CDI Coupé or CLS 350 CDI 4MATIC Coupé), which stops the engine automatically when the car comes to a halt. The electrohydraulic control unit, together with the engine and transmission software, ensures exceptional gear-change dynamics and shift quality. The driver feels this in the car's more direct response to use of the accelerator pedal, for example.

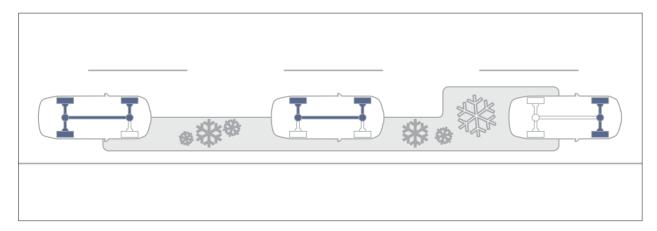

The 7G-TRONIC PLUS: one of over 18 million Mercedes-Benz automatic transmissions produced in a period spanning more than 50 years.

Chassis & suspension.

The permanent all-wheel drive system 4MATIC provides impressive traction as well as enhanced directional and driving stability. The chassis and the AIRMATIC air suspension really come into their own on the road, offering a high level of comfort yet also impressive agility.

4MATIC (option). The all-wheel drive system 4MATIC is always active, so it requires hardly any reaction time to intervene in unfavourable weather conditions such as rain, ice or snow. The 4MATIC is supported by the sensor system of the Electronic Stability Program ESP^{®1} and the electronic traction system 4ETS. 4ETS brakes spinning wheels in a targeted manner and thus steers the drive torque to the wheels with good traction. This makes dynamic moving off and accelerating easier – above all on a poor road surface. 4ETS renders conventional differential locks superfluous: the automatic braking pulses make moving off on slippery surfaces easier as well as enhancing stability during critical manoeuvres. A further advantage of the system is the fact that it is hardly any heavier than the rear-wheel drive version on account of the compact design and the intelligent choice of materials. The CLS 350 BlueTEC 4MATIC², CLS 350 CDI 4MATIC and CLS 500 4MATIC are fitted with fourwheel drive.

The electronic traction system 4ETS facilitates better traction in difficult conditions, such as when the road surface is wet or affected by ice or snow.

AIRMATIC (optional for 4- and 6-cylinder models, standard for 8-cylinder models). AIRMATIC air suspension with adaptive vibration dampers adapts to the road and driving conditions, reducing road roar and tyre vibration levels while enhancing active safety when compared with conventional steel suspension. The driver can select either comfort-oriented or sporty settings manually. At high speed, the car is lowered automatically to improve driving stability, aerodynamics and fuel consumption. The CLS Shooting Brake has air suspension with level control at the rear axle as standard.

DIRECT CONTROL suspension (standard for 4- and 6-cylinder models). The suspension with a selective damping system combines agility with ride comfort. The vibration dampers adapt automatically in line with the current driving situation, thus enhancing both damping and the car's stability – even on poor road surfaces.

Comfort

Integral safety concept.

The stated aim of accident-free driving drives us forward. Our integral safety concept brings us a step closer to achieving this aim – a comprehensive approach that can enhance safety in any situation.

As the inventor of the car we feel that we have a special responsibility for road safety. This is why we are the first car manufacturer to have developed an integral safety concept which seamlessly blends measures to enhance active and passive safety. The holistic approach is subdivided into four phases and offers safety solutions for every situation. It includes systems for safe driving which help to avoid risks by warning you and coming to your aid in good time. Our unique PRE-SAFE® system¹ kicks in the event of danger and activates preventive measures for occupant protection. If a collision should still occur in spite of all the preventive measures, further technologies ensure protection as needed. We have also borne in mind the time immediately following an accident and developed solutions which can help prevent worse and facilitate rapid help.

A selection of these technologies for the "Safe driving", "In the event of danger", "In an accident" and "After an accident" phases is presented on the pages which follow. **Safe driving: ATTENTION ASSIST**¹ (standard). This drowsiness-detection system is especially useful on long trips. At speeds of between 80 and 180 km/h, ATTENTION ASSIST warns the driver as soon as it detects signs of increasing inattention or drowsiness. Sensors analyse driving behaviour and can detect deviations from a previously determined, individual driver profile.

Safe driving: Night View Assist Plus¹ with clear heatinsulating windscreen (option in conjunction with COMAND Online). The central display shows the entire main-beam area – which the infrared camera of the Night View Assist records – as a greyscale image. This means better driver orientation in situations without main beam, so motorists can react earlier to people, animals or objects which are on or alongside the road.

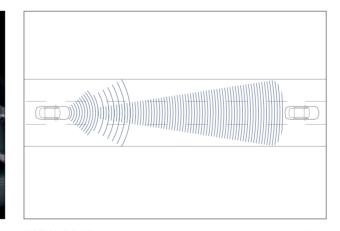

If signs of increased driver drowsiness are detected, ATTENTION ASSIST advises taking a break.

To ensure better visibility, Night View Assist Plus highlights pedestrians on the display.

Safe driving: Lane Tracking package¹ (option). Lane Keeping Assist¹ warns the driver by making the steering wheel vibrate gently if the car is about to leave its lane unintentionally. Blind Spot Assist¹, meanwhile, uses two radar sensors in the rear bumper to monitor the blind spot at speeds above 30 km/h and can warn the driver against dangerous lane changes. Both systems are also available separately as individual options. Safe driving: Driving Assistance package Plus¹ (option). This package includes DISTRONIC PLUS¹ adaptive cruise control as well as Active Lane Keeping Assist¹ and Active Blind Spot Assist¹. DISTRONIC PLUS helps the driver to maintain the desired distance between the car and the vehicle in front by braking the car, to a standstill if necessary, and then accelerating it again. Active Blind Spot Assist monitors the areas to the left and right beside the car as well as to the side behind the car. If a vehicle is detected in the

DISTRONIC PLUS adaptive cruise control can brake the car to a standstill then accelerate it again, for example when driving in a queue of traffic. monitored area, a symbol appears in the exterior mirror's glass to warn the driver. If the driver misses this warning, indicates and starts to change lanes despite a further, acoustic warning signal, the system can intervene actively via the ESP® control¹ and correct the direction of travel moderately. Active Lane Keeping Assist monitors the lane markings continuously. If the system detects the vehicle unintentionally crossing the white markings, it warns the driver by making the steering wheel vibrate gently. If the driver fails to respond, the system can also actively brake the vehicle and prevent it from leaving its lane.

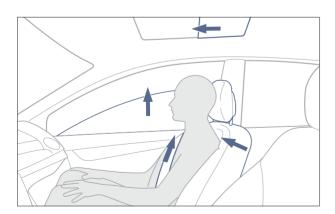

Safe driving: LED tail lights and adaptive brake lights

(standard). The tail lights, brake lights and third brake light employ LEDs and emphasise the sporty design of the car. During emergency braking, the adaptive brake lights signal a hazardous situation to the traffic behind by flashing.

Lane Keeping Assist and Blind Spot Assist can warn the driver in potentially dangerous situations.

In the event of danger: PRE-SAFE® system¹ (standard). As a precaution, the PRE-SAFE® system can activate protective measures designed to prepare the occupants for a subsequent accident. Measures include reversible tensioning of the driver and passenger seat belts as well as automatic closing of the open windows and/or the optional sliding sunroof – depending on the driving situation and the vehicle equipment.

The anticipatory occupant protection system PRE-SAFE[®] can recognise critical driving situations and initiate preventive measures in order to protect the occupants.

In the event of danger: PRE-SAFE[®] Brake¹ (part of the optional Driving Assistance package Plus¹). As a three-stage warning and braking system, the PRE-SAFE[®] Brake can intervene prior to an impending rear-end collision: if there is no reaction from the driver following an initial visual and acoustic warning, the system can initiate autonomous partial braking as a tactile warning. If there is still no reaction from the driver, autonomous emergency braking can be initiated. The PRE-SAFE[®] Brake then reacts around 0.6 seconds before an accident deemed unavoidable and initiates emergency braking to reduce the impact speed and the severity of the collision.

In the event of danger: Brake Assist BAS PLUS¹ (part of the optional Driving Assistance package Plus). Brake Assist BAS PLUS in conjunction with the PRE-SAFE[®] Brake can help to prevent rear-end collisions. The anticipatory system uses radar sensors to evaluate driving situations autonomously and, if needed, provides extra braking power based on the distance to the vehicle in front and the relative speed. If the radar sensors detect a potential collision and the driver applies the brakes in time, BAS PLUS is primed to apply brak-

ing pressure in accordance with the available stopping distance. Furthermore, when the brakes are applied abruptly, the adaptive brake lights warn the traffic behind.

In an accident: restraint systems (standard). Nine airbags are fitted to protect you and your passengers: the front airbags – deployed in two stages, depending on the predicted accident severity – are complemented by sidebags and pelvisbags for the driver and front passenger as well as by windowbags. The kneebag can further reduce the forces exerted on the driver during an accident. Rear sidebags on both sides are available as an option.

Seat belts are an essential part of occupant protection and become even safer through active elements, such as belt tensioners and belt force limiters. Electromotive belt tensioners at the front seats react fractions of a second before a potential accident and thus reduce the loads on the occupants. In an accident: NECK-PRO head restraints (standard). These can be activated for the driver and front passenger during a rear impact, in accordance with the severity of the impact: a spring mechanism pulls them forwards and upwards. This means that the head can be supported earlier and the load on the cervical vertebrae reduced. In addition to this the high structural safety of the body and the highly stable occupant cell with various parallel load paths in the front and tail end ensure improved load distribution during an impact, plus special side impact reinforcements in the doors see to it that the loads on the occupants remain as minimal as possible.

After an accident: Mercedes-Benz emergency call system

(part of COMAND Online). This system can make an emergency call automatically using a mobile phone which is on standby and connected to the vehicle as soon as the restraint system detects an accident. At the same time,

The NECK-PRO head restraints can reduce the risk of whiplash significantly

in a rear impact.

The energy-absorbing crumple zones in the front and rear sections, an extremely robust safety passenger cell, and the doors with special reinforcing elements form an effective defensive barrier in an emergency.

the GPS position data and other data about the vehicle are transmitted to the Mercedes-Benz emergency call centre, after which a voice connection is established. The emergency call system can also be triggered manually.

Measures after an accident. In order to reduce consequential damage and, where necessary, to support the rescue of the occupants, Mercedes-Benz has developed further measures. These include the automatic engine cut-off or the activation of the hazard warning lamps and interior emergency illumination. The central locking also opens automatically, and crash joints between the door and the wing make it easier to open the doors after an impact. In addition Mercedes-Benz makes Guidelines for Rescue Services available; helpers can download them in different languages all over the world from the internet at www.mercedes-benz.de/rettungsleitfaden. As you can see, at Mercedes-Benz consideration has been given to safety in every situation. Safety

Comfort

AMG

Light.

Good visibility in the dark enhances driving comfort and, above all, safety. The CLS headlamps light up the road to optimum effect and even adjust in line with the course of the road.

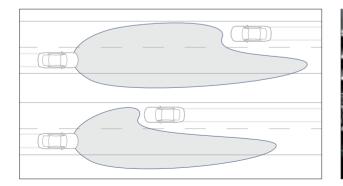

LED High Performance headlamps with C-shaped sidemarker lamps (option). The optionally available dynamic LED High Performance headlamps (standard on the CLS 63 AMG) in combination with an LED daytime driving light strip in the bumper covering are exciting developments in the lighting sector. The sophisticated, distinctive design of the LED High Performance headlamps emphasises the dynamism of the vehicle form and lends the front end an exceptionally high-quality character. In the dark, the headlamps are unmistakable on account of the C-shaped LED side-marker lamps. The LED technology combines maximum radiance with minimal energy consumption and a long lifetime. What's more, the light produced by the LED High Performance headlamps is very easy on the eyes, as its colour temperature of 5500 Kelvin makes it closer to daylight than the light produced by xenon headlamps.

The optional LED High Performance headlamps are one of the design highlights of the CLS.

LED Intelligent Light System¹ (in conjunction with optional LED High Performance headlamps – standard on CLS 63 AMG). All five functions of the Intelligent Light System – country mode, motorway mode, enhanced fog lamps, cornering light function and active light function – have been combined with LED technology in the CLS.

The optional Adaptive Highbeam Assist¹ ensures the best possible illumination of the road automatically in any driving situation.

Bi-xenon headlamps (standard). When set to low beam, the bi-xenon headlamps ensure better and wider illumination of the road verges. When switched to high beam, they have a much greater range than conventional headlamps. Dynamic, sensor-controlled range adjustment automatically compensates for any changes in the vehicle level when braking or accelerating. **LED tail lights with night design** (standard). The LED tail lights are drawn around into the car's flanks, giving the rear design its characteristic profile. The brake lights are based on the same look as the tail lights, and the luminosity of the LEDs is increased substantially during braking. Intermediate lenses highlight the contours even when the lights are switched off.

The optional Adaptive Highbeam Assist always provides the best possible headlamp range automatically.

The bi-xenon headlamps with circular daytime running lamps in the bumper come as standard.

The LED tail lights dominate the rear view of the CLS.

¹ Integral component of Mercedes-Benz Intelligent Drive. More on page 44.

Comfort

Multimedia systems.

The multimedia functions in the CLS can be operated via an easy-to-use Controller located on the centre console. Alternatively you can use the buttons on the devices themselves or the multifunction steering wheel. The head units available for selection are the Audio 20 CD and COMAND Online.

COMAND Online (option). The multimedia system boasts a high-resolution 17.8 cm colour display. The system's functions include a radio, speed-sensitive volume control, the Music Register with a 10 GB hard disc and hard-disc navigation with 2D and 3D map display. What's more, for 3 years from the initial registration it also includes free updates for European map data. Besides video and audio DVDs, the DVD drive also plays CDs and MP3 files. In combination with a web-enabled mobile phone, it is possible

COMAND Online combines mobile internet access with audio and navigation systems as well as a telephone function.

to access the internet plus various mobile apps from Mercedes-Benz, such as car park search, POI search including Google Street View, hotel finder, news or weather. A USB socket, a slot for SD memory cards as well as a Bluetooth[®] interface with hands-free facility, text message display and audio streaming enable connections to external data carriers and a mobile phone.

The system can be operated using the central Controller, the buttons on the multifunction steering wheel or by voice control with LINGUATRONIC.

The Digital Owner's Manual contains the complete descriptions for operating the vehicle and the COMAND Online. It can be called up quickly and easily via the system.

SPLITVIEW (option). SPLITVIEW allows the front passenger to watch a movie, while the driver keeps an eye on the information from the COMAND system on one and the same display. A special screen affixed to the display divides this mixed image optically so that only the pixels for one of the two images can be seen, depending on the seat position.

SPLITVIEW enables the driver and front passenger to watch two different sets of content on the colour display at the same time.

Audio 20 CD (standard). The Audio 20 CD radio features a 14.7 cm display, an RDS dual tuner with traffic information decoder, a Bluetooth[®] and USB interface with hands-free facility, text message display and audio streaming, as well as an MP3-compatible CD player. A 6-disc CD changer is available as an option. All functions can be controlled conveniently using the multifunction steering wheel and the Controller on the centre console.

Audio 20 CD with optional Becker® MAP PILOT.

Becker® MAP PILOT (option). The Becker® MAP PILOT allows the Audio 20 CD to be extended, making it a fully fledged vehicle-integrated navigation device. A GPS receiver and computer unit form part of the device. The Becker® MAP PILOT is secured in the glove compartment and can easily be taken out again. New map data is available via a simple update from the internet.

Harman Kardon[®] Logic 7[®] surround sound system

(option). Equipped with 14 loudspeakers, including a subwoofer, and a 9-channel DSP sound amplifier, this optionally available Dolby Digital 5.1 system has an output of 610 watts, giving you melodious acoustics in all seats when combined with the Audio 20 CD or the COMAND Online system. 3D surround sound and speed-sensitive volume control ensure constant listening pleasure. **Bang & Olufsen BeoSound AMG** (option). This surround sound system with 14 high-performance loudspeakers in the CLS Shooting Brake/15 loudspeakers in the CLS Coupé and a DSP amplifier with 1200 watts ensures first-class acoustics. The surround sound playback can be individually adjusted throughout the entire passenger compartment. 3D surround sound and microphone-controlled soundcorrection software ensure constant listening pleasure and maximum sound precision.

14/15 loudspeakers and 1200 watts delight the ears: the Bang & Olufsen BeoSound AMG.

60	Drive s	ystem &	chassis
----	---------	---------	---------

Assistance systems.

Assistance systems are designed to make life easier. In this respect, Speed Limit Assist, the reversing camera¹ and Active Parking Assist¹ enhance the feeling of comfort and safety in the CLS.

Speed Limit Assist (option). Speed Limit Assist can detect speed-limit signs by means of a windscreen-mounted camera and display them as symbols on the instrument cluster as well as in the navigation display. The camera filters out circular speed-limit signs, regardless of whether they are at the side of the road or on a gantry above the road. Speed Limit Assist is especially helpful on routes with variable-message signs or roadworks. In addition, this system compares the displayed speed limits – such as when entering or leaving towns – with the data stored in the navigation system.

Speed Limit Assist even indicates temporary speed limits. ¹ Integral component of Mercedes-Benz Intelligent Drive. More on page 44. Services

Reversing camera (option). The reversing camera monitors the area directly behind the car with its wide-angle lens and sends the images to the central COMAND display. It is activated automatically when reverse gear is engaged, thus helping the driver when reversing. Active Parking Assist, including PARKTRONIC¹ (option). With the Active Parking Assist from Mercedes-Benz the vehicle looks for a suitable parking space by itself and automatically parks the car at the press of a button, whilst the driver only needs to actuate the accelerator and brake pedal as soon as they have stopped, accepted the parking space suggestion and engaged reverse gear. The Active Parking Assist deals with the steering on its own. The system works extremely precisely: for the automatic parking procedure the parking space has to be approximately 1.30 metres longer than the vehicle. The PARKTRONIC's ultrasonic sensors measure the distance from the vehicle at the front and rear during the automatic parking process. The Active Parking Assist system uses a total of ten ultrasonic sensors, six in the front and four in the rear bumper, plus there is an electronic control unit which processes the sensor signals and calculates the optimum route into the parking space.

During parking, the COMAND Online central display shows the area behind the car.

The display in the instrument cluster gives you a clear picture of the parking manoeuvres at all times.

Seats.

In terms of style, the link between the interior and exterior design of the CLS is seamless. The aesthetic individuality continues inside the car, adding distinctive touches and thus enhancing driving enjoyment.

The active multicontour seats are designed to meet the highest requirements in terms of individual seating comfort, ergonomics and safety.

The interior design picks up on the themes of the exterior design. For instance, the "dropping line" shaping of the door linings reflects the exterior's dynamic, forward-thrusting side line, while the feeling of momentum generated by the centre console is mirrored in the doors and the beltline, thus giving the occupants a feeling of security. This feeling is further enhanced by elegant topstitching as well as the use of high-quality and authentic materials such as leather, wood and piano lacquer, depending on the interior appointments selected by the customer.

Memory package (option, standard in the CLS 63 AMG). The Memory package enhances convenience if several different people drive the car or sit in the front-passenger seat. A control panel is used to move the front seats, head restraints, steering column and exterior mirrors. Three different groups of settings can be stored for each seat. The integral, electrically adjustable 4-way lumbar support allows each seat occupant to select their preferred settings. Active Multicontour Seat package (option). The active multicontour seat with massage and dynamic functions for the driver and front passenger helps to ensure a comfortable ride on long trips. The seat contours can be adjusted to suit individual body shapes using the COMAND Controller. What's more, the active multicontour seat adjusts dynamically in accordance with the driving situation. The NECK-PRO luxury head restraints for the front seats are integrated here. **NECK-PRO luxury head restraints** (option). The flexible side bolsters of the luxury head restraints improve lateral support of the head and enhance comfort. Furthermore, the head restraints are activated by means of sensor control if a rear impact is detected. They are then moved into a better position to reduce the risk of whiplash injuries. Following deployment the head restraint can be pushed back into the original position manually. **Single seats in the rear** (standard in the CLS Coupé). The luxurious ambience in the interior of the CLS is underlined by the shape, colour scheme and material of the seats. The individuality of the design is once again emphasised – by the single seats in the rear, which are separated from one another by a centre console with a folding armrest. The vertical fluting elements in the seat surfaces and backrests lend the seats their unmistakable profile. In the CLS Shooting Brake there is a fifth seat instead of the centre console.

The active multicontour seats with massage and dynamic functions.

The NECK-PRO luxury head restraints can reduce the risk of whiplash injuries.

Comfortable single seats await the rear passengers in the CLS Coupé.

Comfort

Space.

A dream of a load compartment: the new CLS Shooting Brake is a shining example with its particularly elegant luggage area.

Boasts a luggage capacity of 590 litres (1550 litres with the rear backrest folded down) and offers the option of a designo wood floor made of open-pore American cherry with black inlay work.

Load compartment. Particular attention was given to the design of the luggage area of the CLS Shooting Brake. By way of example, on request you can have a fine designo wood floor made of open-pore American cherry and featuring black inlay work. It is ideally matched to the interior design and lends the interior of the vehicle maximum high-class appeal. Exclusive details, such as trimmed beltlines with lavish stitching, add to the harmonious overall effect.

Anything that looks this good should stay neat and tidy, which is where side nets for the practical storage of smaller items come in useful. And where variability is writ large, comfort is never far away. For the new CLS Shooting Brake is fitted as standard with the EASY-PACK tailgate. At the touch of a button a motor takes care of the automatic opening and closing of the tailgate, which makes loading and unloading so much easier. **Designer aluminium rails** (option). The designer aluminium rails on the load compartment floor increase the high-class appeal of the load compartment and ensure additional non-slip properties – important when transporting loads.

EASY-PACK load-securing kit (option). With the EASY-PACK load-securing kit the load compartment can be variably subdivided into individual segments. Items can be secured for transporting using a telescopic rod. The optional load-securing net offers additional protection against objects in the load compartment.

Variability. More space with one simple action: the standard EASY-PACK quickfold makes loading the CLS Shooting Brake easier. With operating levers at the left and right in the load compartment, the rear seat backrests can be folded either as a whole or, if required, also separately. Thanks to TIREFIT there are 130 litres of additional stowage space beneath the load compartment floor where the spare wheel would normally be. For electronic devices there is a 12 V socket.

Optional extra: designer aluminium rails on the load compartment floor.

Load compartment with optional EASY-PACK load-securing kit.

Rear seat backrest with a single-seat character, folded 2/3.

CLS 63 AMG exterior.

AMG – three letters that are internationally synonymous with leading-edge technology, exclusivity and refined sportiness. The unique experience begins before you even get into the CLS 63 AMG – as you savour the exterior design. \rightarrow www.mercedes-amg.com

Just looking at the car is an electrifying experience in itself: from the exclusive AMG bonnet design to the AMG spoiler lip on the boot lid of the coupé, the CLS 63 AMG impresses with its hallmark, energetically expressive AMG appearance. This model combines the distinctive aura of the CLS with the design of a sports car: the unique widened front wings,

the single-louvre radiator and the powerful AMG front apron combine with the LED High Performance headlamps and exclusive AMG LED daytime running lamps integrated in the outer air dams to create a symbol of thrilling dynamism. This momentum is underlined by triple-spoke AMG lightalloy wheels painted in titanium grey with a high-sheen finish, the exclusive AMG diffuser-style rear apron with an integral rear fog lamp and, of course, the AMG sports exhaust system with stainless-steel twin tailpipes.

The exclusive AMG aura lends the vehicle an even more dynamic appearance.

CLS 63 AMG interior.

One look at the interior of the CLS 63 AMG is all it takes to realise what the Mercedes-AMG experts mean by "custom-designed dynamism".

The interior of the CLS 63 AMG is an exciting blend of fine materials, refined craftsmanship and consistently sporty design. At the heart of the cockpit is the AMG DRIVE UNIT with its E-SELECT lever and AMG emblem, which can be used for individual control of drive modes, ESP[®] functions¹ and suspension set-ups. Above this is the new AMG 3-spoke performance steering wheel with flattened top and bottom sections, equipped with silver-coloured aluminium shift

paddles, and the AMG instrument cluster with its AMG main menu including RACETIMER. These sporty attributes are blended with exclusive agility: ergonomic AMG sports seats in nappa leather, brushed stainless steel for the AMG door sill panels and the AMG sports pedals, which also feature non-slip rubber studs. A black piano lacquer trim and an analogue clock in an exclusive IWC design complete the impression of style-conscious sportiness. Maximum performance for the ears is promised by the optional 1200-watt Bang & Olufsen BeoSound AMG high-end sound system with 14 loudspeakers in the CLS Shooting Brake and 15 loudspeakers in the CLS Coupé.

The interior of the CLS 63 AMG features a thrilling mix of fine materials and sporty design.

CLS 63 AMG S-Model.

Sublime dynamism: its supreme performance makes this car a uniquely sporty phenomenon.

With the ability to race from 0 to 100 km/h in just 3.6 seconds, the CLS 63 AMG S-Model effortlessly heads the competition. Its AMG 5.5-litre V8 biturbo engine generates a maximum output of 430 kW (585 hp) and a peak torque of 800 Nm – that's an increase of 20 kW (28 hp) on the CLS 63 AMG. the front head restraints of the AMG sports seats. The restyled AMG instrument cluster includes an "S AMG" logo in the 320-km/h speedometer and red detailing. The exclusive specification is completed by white illuminated AMG door sill panels.

And for all those who desire even more dynamism, there is the AMG Driver's package, which gives an electronically governed top speed of 300 km/h (in the case of the CLS Shooting Brake 280 km/h). Participation in driver training at the AMG Driving Academy is also included.

The CLS 63 AMG S-Model can be distinguished from its siblings from the outside by the red-painted brake callipers and the AMG logo on the boot lid with "S-Model" lettering in contrasting black. The black nappa leather interior of the S-Model features light-coloured contrasting stitching on the AMG sports seats, the door centre panels, the door armrests and the centre console, together with silver-coloured seat belts (Code 831). The AMG Performance steering wheel in black nappa leather is flattened at the top and bottom and features grip areas trimmed in perforated Alcantara[®]. Exclusive AMG emblems are embossed into

AMG sports seats in black nappa leather – with light-coloured contrasting stitching, silver-coloured seat belts and AMG emblems in the head restraints.

Equipment & appointments	Services

Facts & colours

High performance even when at a standstill: the CLS 63 AMG S-Model.

Comfort

CLS 63 AMG technology.

The AMG 5.5-litre V8 biturbo engine and the AMG SPEEDSHIFT MCT 7-speed sports transmission make for emotive driving experiences and outstanding efficiency. Yet when it comes to choosing a sporty or comfort-oriented driving style, the driver always has the final say in the CLS 63 AMG.

AMG 5.5-litre V8 engine. The twin-turbocharged AMG V8 in the CLS 63 AMG impresses on two counts above all: its exciting dynamism and a level of efficiency that is nothing short of extraordinary in this output category. As you might expect from Mercedes-AMG, it produces a powerful sound – with a rated output of up to 430 kW (585 hp) and a peak torque of 800 Nm in the AMG S-Model. The low fuel consumption for this output category is largely thanks to direct petrol injection with spray-guided combustion, twin turbo-chargers, alternator management and Controlled Efficiency mode with ECO start/stop function.

Motor-racing technology gives the AMG 5.5-litre V8 engine maximum agility.

AMG SPEEDSHIFT MCT 7-speed sports transmission.

Bringing you the best of both worlds: the sporty, direct and agile feedback of a manual transmission paired with the outstanding convenience of an automatic. Yet the high-tech transmission still gives the driver a free hand as, in addition to the "Race Start" and automatic double-declutching functions, it offers a further four individual modes: Controlled Efficiency – or "C" for short – stands for extremely consumption-optimised driving, while the "S" (Sport), "S+" (Sport Plus) and "M" (Manual) modes enhance dynamism. They allow gear changes in under 100 ms thanks to the partial suppression of individual cylinders when upshifting. A compact, wet clutch in place of the conventional torque converter translates accelerator pedal movements into forwards thrust instantaneously.

AMG-specific 4MATIC all-wheel drive. From 0 to 100 km/h in 3.6 seconds: the purpose developed all-wheel-drive system with rear-biased torque distribution has been honed for top performance, combining hallmark AMG driving dynamics with maximum possible traction.

AMG RIDE CONTROL sports suspension. The wider front axle used for the AMG sports suspension enhances lateral dynamics substantially, while the electronically controlled damping system on the rear axle allows lightning-fast changes in the set-up, depending on whether maximum agility or ultimate ride comfort is required. The AMG RIDE CONTROL sports suspension also offers an impressive array of individualisation options, allowing the driver to select from a range of suspension modes: "Comfort", "Sport" and "Sport Plus".

Furthermore, it gives the driver the option of switching the ESP®1 dynamic handling control system to "ON", "SPORT-HANDLING" or "OFF" mode. The AMG speed-sensitive sports steering has an even more direct ratio and, therefore, offers exemplary steering precision and direct turn-in ability. The AMG high-performance brake system with 360 mm brake discs ensures outstanding levels of deceleration and fade resistance. The front brakes deliver exceptional performance thanks to the same compound technology as that used in motorsport and large 6-piston callipers.

AMG Performance Studio.

There can be varying degrees of exclusivity. To ensure that your car ticks all the boxes, the AMG Performance Studio offers a broad selection of ex factory options to satisfy the desire for even greater sportiness, exclusivity and individuality.

The AMG Performance Studio brings the sporty traits of the CLS 63 AMG even further to the fore, in terms of both performance and aura, by offering a wide range of attractive individualisation options. These include the AMG Exterior and Interior Carbon-Fibre packages, the AMG ceramic highperformance compound brakes, the AMG performance steering wheel or the AMG RIDE-CONTROL sports suspension. What's more, the AMG Performance Studio in Affalterbach can also meet further customer requirements – even including one-off specimens.

Exterior Sports package.

Should you wish to add carefully selected details to further emphasise the athletic character of your CLS, the optional Exterior Sports package could be just what you are looking for.

5-twin-spoke light-alloy wheel (Code R17).

Visual highlights are provided by the rectangular tailpipe trims integrated in the bumper, finished in stainless steel on both sides. The sporty side of the CLS is given further emphasis by attractive 5-spoke, 10-spoke and 5-twin-spoke light-alloy wheels in silver, anthracite or himalayas grey and mixed-size tyres, as well as the black-painted rear-bumper insert.

The Exterior Sports package makes your CLS look even more irresistible, while the steel suspension is fine-tuned with firmer dampers to make it even more sporty (not in conjunction with AIRMATIC air suspension).

AMG Sports package.

Get your CLS into tip-top shape. The sporty and athletic styling elements in the optionally available AMG Sports package lend your car extra dynamism all round.

The powerful AMG front apron, the AMG rear apron with integral chrome trim and the single-louvre radiator grille take the look of the CLS up another gear. The 4- and 6-cylinder models get a two-pipe sports exhaust system with visible, stainless-steel tailpipe trims integrated in the rear apron. The steel suspension is firmer and more sporty. 5-spoke AMG light-alloy wheels with a high-sheen finish and mixed-size tyres (front 255/40 R 18 and rear 285/35 R 18) round off the dynamic exterior. Larger AMG light-alloy wheels with mixed-size tyres (front 255/35 R 19 and rear 285/30 R 19) are available as optional extras. The interior is dominated

by the 3-spoke multifunction sports steering wheel in black nappa leather (in almond beige if almond beige appointments are ordered) with a flattened bottom section, including shift paddles. The E/S/M switch allows the driver to select an economical, sporty or manual transmission mode. Floor mats with "AMG" lettering, sports pedals in brushed stainless steel with rubber studs, and the distinctive, bright contrasting topstitching in conjunction with the optional black upholstery in leather, PASSION leather or Exclusive PASSION leather complete the sporty interior. The 8-cylinder CLS 500 and CLS 500 4MATIC models are equipped as standard with sports pedals, an AMG front apron, single-louvre radiator grille, AMG rear apron with integral chrome trim and a two-pipe sports exhaust system.

Genuine accessories.

A Mercedes-Benz can be a travel companion, an office or a living space. To make even better use of this diversity, the Mercedes-Benz range of genuine accessories has been fully customised for the CLS. \rightarrow www.mercedes-benz-accessories.com

With the Rear Seat Entertainment System, your enjoyment doesn't have to take a back seat (also available as optional extra Code E78).

Rear Seat Entertainment System. The elegant DVD system allows your favourite films, images and even video games¹ to be shown on two brilliant 17.8 cm LCD colour screens. The rear passengers can view a film together or each watch their own choice of content thanks to separate DVD players. In addition to this, you can use further storage media via the USB interface or SD card slot. The Rear Seat Entertainment System requires no pre-installations at the factory whatsoever and can be retrofitted easily.

¹External devices such as games consoles can be connected. ²Genuine accessory wheels are supplied without tyres, hub caps and wheel bolts. Availability depends on the engine and selected equipment and appointments. Further information is available from your authorised Mercedes-Benz dealer.

Light-alloy wheels. The flamboyant high-end design of the light-alloy wheels underlines the effortlessly superior presence of the CLS. The light-alloy wheels come in a range of different sizes and designs, such as 10-spoke wheels painted in black with a high-sheen finish paired with mixed-size tyres (front 255/35 R 19 and rear 285/30 R 19).

Door sill panels. Characteristic features include the door sill panels in brushed stainless steel, which set off the "Mercedes-Benz" lettering in white to stunning effect. The panels protect the entrance area and with their elegant engraving they make a fine impression.

In our accessories brochure you will also find a wide selection of high-quality items covering practically every aspect of your vehicle. What you see here is just a small selection of what is on offer. Your authorised Mercedes-Benz dealer will also be pleased to advise you.

Light-alloy wheels painted in black².

Door sill panels with "Mercedes-Benz" lettering (also available as optional extra Code E13).

Services.

Mercedes-Benz Financial Services. Our sophisticated leasing and financing products are tailored to your individual financial needs, giving you the opportunity to drive your dream car while staying financially flexible. Once you have chosen a model, you can enjoy the peace of mind of knowing that both the vehicle itself and our insurance products will keep you particularly well protected. What's more, our range of service products is designed to ensure that your car stays in top shape while offering transparent, manageable conditions. For further details, speak to your Mercedes-Benz dealer, who will be glad to go through the latest financial services and terms and conditions with you.

Mercedes-Benz mobility. Your new car comes complete with the promise of feeling safe on the road. But if you should ever need assistance, Mercedes-Benz Service24h is there to help. Just call the freephone service hotline on 00800 1 777 7777¹. The integrated telematics service, Mercedes-Benz Contact², is even more convenient: a touch of a button is all it takes to contact the Mercedes-Benz customer centre. If you wish, relevant vehicle and positionrelated data are transmitted at the same time, thereby allowing the centre to react quickly and provide rapid on-site assistance. Also standard with your new car at no extra charge is the Mercedes-Benz Mobilo³ mobility package. Whether you have lost your key, had a breakdown which cannot be repaired immediately or suffered damage to the vehicle due to an accident or vandalism, Mobilo helps you reach your destination - anywhere in Europe. Whatever is holding you up, you will soon be able to resume your journey. **Mercedes-Benz Museum.** Discover what has been moving the world for over 125 years, and embark on a fascinating journey through automotive history in the Mercedes-Benz Museum. More than 1500 exhibits covering an area of 16,500 square metres chart the unique heritage and innovative flair of the inventor of the motor car. You will find one automotive legend after another awaiting you: unique pieces such as the oldest Mercedes still in existence from 1902, supercharged cars or the awe-inspiring Gullwings. The museum is a spectacular sight in its own right too, thanks to an architecture that breaks away from traditional concepts and creates an unprecedented sense of space. Welcome to the Mercedes-Benz Museum – a world of innovation. www.mercedes-benz-classic.com/museum

¹ Alternative: +49 69 95 30 72 77. ² Requires a factory-fitted radio, connected to an operational mobile phone. The only charge incurred is the cost of the mobile phone call to the landline network. ³ Once the mobility guarantee has expired (four years), Mobilo can be extended to provide cover in the event of breakdown and insurance claims one year at a time for a maximum of 30 years, provided that regular maintenance is carried out by your Mercedes-Benz service partner.

Test drive. The unique feeling of driving a Mercedes cannot be put into words – you have to experience it for yourself. Take a test drive and find out first hand how it feels to drive your dream car. Please contact your nearest Mercedes-Benz dealer for details.

Interactive Owner's Manual and Mercedes-Benz Guides.

The website also offers an interactive tour, enabling you to acquaint yourself with your dream car. You can view key functions in detail, gain an insight into the car's inner workings or look at the benefits of each model. For further details, go to www.mercedes-benz.de/owners-manual. The "Mercedes-Benz Guides" app lets you explore the highlights of the individual models both online and offline. The app is available free of charge from the Apple® iTunes® Store (iOS) as well as the Google Play store (Android).

Mobile internet. The whole world of Mercedes-Benz can be explored at any time with your web-capable mobile device – including specially adapted content for both smartphones and tablets. As well as an overview of all the passenger car models, there are insights into the entire brand world along with a wealth of entertainment offers and direct links to our range of services at www.mercedes-benz.com **Mercedes-Benz service contracts.** You need never worry about unexpected workshop costs⁴ again: depending on the specific contract, a Mercedes-Benz service contract can cover unforeseen repairs, maintenance or wear parts. As a result, your vehicle stays in great condition – thanks to the Mercedes-Benz quality you can expect from our highly qualified workshop specialists and Mercedes-Benz genuine parts. Your Mercedes-Benz dealer will be pleased to tell you more about the available service contracts and terms and conditions. Accident repairs. Should the worst happen and you find yourself in need of repairs, with the Mercedes-Benz accident repair service you will receive the right assistance for your vehicle and ensure that its high-quality safety features are properly maintained. Whether you need paint, body or glass repair work carried out, the highly trained specialists at your Mercedes-Benz service partner will repair your Mercedes-Benz and get you quickly back on the road again. Further information is available from your authorised Mercedes-Benz dealer.

⁴ Figures in accordance with Directive 92/21/EC, version 95/48/EC (kerb weight with fuel tank 90% full, driver, 68 kg, and luggage, 7 kg) for standard-specification vehicles. Optional extras and accessories will generally increase this figure and reduce the payload capacity accordingly. ⁵ Available for CLS Coupé only. You can find further technical data at **www.mercedes-benz.com**

Take-back of end-of-life vehicles. You can return your CLS-Class to us for environment-friendly disposal in accordance with the European Union (EU) End-Of-Life Vehicle Directive. But that day lies a long way off.

A network of vehicle take-back depots and dismantlers has been established to make it as easy as possible for you to return your vehicle. You can leave it at any of these points free of charge and, by doing so, make an important contribution to completing the recycling process and conserving resources.

For further information about the recycling and disposal of end-of-life vehicles, and the take-back conditions, please visit the national Mercedes-Benz website.

Please note: changes may have been made to the product since this brochure went to press (12.03.2013). The manufacturer reserves the right to make changes to the design, form, colour and specification during the delivery period, provided these changes, while taking into account the interests of the vendor, can be deemed reasonable with respect to the purchaser. Where the vendor or the manufacturer uses symbols or numbers to describe an order or the subject of an order, no rights may be derived solely from these. The illustrations may show accessories and items of optional equipment which are not part of standard specification. Colours may differ slightly from those shown in the brochure, owing to the limitations of the printing process. This brochure is distributed internationally. It provides a general indication of the range of models, features, optional extras and colours shown may not be available in your country or may only be available in a different specification. Additionally some models, features, optional extras and colours may only be available in combination with others. For current and more specific information in relation to the range of models, features and colours available in your country, and their pricing, you should contact your nearest authorised Mercedes-Benz Passenger Car Dealer.
